

Software Development Engineer delivering impactful full-stack and backend solutions. Expertise: Java, Python, JavaScript, WebSockets, React, Node.js, and API design. Proven ability to scale systems, enhance data integrity, and fortify reliability through disciplined debugging and strong data modeling.

TECHNICAL SKILLS

Programming: Java, Python, Javascript, Typescript, SQL, Data Structures and Algorithms.

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle.

Frameworks & APIs: Spring Boot, FastAPI, Node.js/Express, React, Vue.js, REST APIs, WebSockets.

Cloud : Amazon Web Services (AWS) IAM,S3, Lambda, CloudWatch, Supabase(Auth, RLS, Edge Functions).

Development Practices: CI/CD, Git, GitHub, Agile, Software Development Life Cycle, OAuth 2.0, JWT.

EXPERIENCE

Full-Stack Developer | Community Dreams Foundation | New Jersey, USA

Jul 2025 - Present

Context: Led a commercial operations platform utilized by customers, administrators, and field staff, with responsibility for system architecture, debugging, workflow automation, and stakeholder coordination throughout the release cycle.

- Built a commercial operations platform for customers, admins, and field staff by delivering core workflows and owning end-to-end debugging, resulting in smoother day-to-day execution and fewer operational blockers.
- Reduced quoting errors and clarification cycles by 60% by delivering a commercial walkthrough with autosave, validation, photo uploads, and live estimate previews.
- Cut manual coordination and recurring support issues by automating 15+ workflows (quotes, notifications, staff assignment, timelines) using Supabase Edge Functions with structured logging and retry logic.
- Eliminated recurring permission inconsistencies across Customer/Admin/Staff portals by implementing JWT authentication, Row-Level Security (RLS), and RBAC, resulting in more reliable access control and cleaner data boundaries.
- Designed modular service boundaries separating pricing logic, booking orchestration, authentication, and notification pipelines to reduce cross-feature coupling and improve long-term maintainability.

Software Engineer | WebMD | Navi Mumbai, India

Apr 2023 - Jul 2023

Context: Developed internal productivity tools to improve task tracking and operational visibility for engineering teams.

- Built an internal worklog calendar using Python, Vue.js, and PostgreSQL to centralize daily updates for engineers and managers.
- Designed core flows for logging progress, viewing team status, and tracking updates over time, enabling managers to quickly identify blockers and follow up with context.
- Implemented a clean data model and API workflows to support consistent entries, fast retrieval, and reliable updates across users and teams.
- Improved operational visibility by enabling near real-time status updates and efficient data loading, significantly reducing manual status checks and cross-team follow-ups overall.
- Improved developer experience by standardizing a repeatable local setup and deployment workflow, reducing environment drift and speeding up onboarding for new contributors.

Software Engineer Intern | MinitzGo | Hyderabad, India

Aug 2022 - Mar 2023

Context: Contributed to a real-time e-commerce platform with dynamic product interactions and responsive user flows.

- Built and optimized React components for product listings, search filters, and infinite scroll with paginated APIs, improving responsiveness and reducing UI jank during browsing.
- Implemented WebSocket-based cart and inventory updates to keep user sessions consistent without manual refresh.
- Improved login and checkout reliability by implementing secure authentication flows with validation and error handling, reducing failed requests and edge-case issues.
- Boosted mobile usability by adding PWA capabilities like service workers and offline caching, plus basic SEO optimizations, improving load performance and engagement on low-connectivity networks.

PROJECTS

CrowdShield : Real-Time Moderation System | Spring Boot, Redis, PostgreSQL, OpenAI, WebSockets

- Built an asynchronous queue/worker pipeline with Redis to moderate content without blocking user requests.
- Integrated the OpenAI API with threshold-based scoring and retries to keep outcomes consistent during transient failures.
- Designed PostgreSQL schemas for job states and audit logs to support traceability, review workflows, and rule tuning.
- Implemented WebSocket progress updates and an admin dashboard for reviewing flagged items and adjusting moderation rules.
- Decoupled user submission from AI moderation using Redis-backed async queues, and reliable classification under burst traffic.

ChopURL : Custom URL Shortener | Python, FastAPI, Redis, Vue.js

- Built a URL shortener with Redis-backed lookups, TTL expiry, and an admin dashboard for link management.
- Implemented click analytics, validation, and guardrails to prevent invalid or abusive short-code creation.
- Optimized Redis access patterns and minimized database round-trips to sustain low-latency redirects under concurrent traffic.

CineTrail : Discovery & Recommendation System | React, Python, MySQL, WebSockets

- Built a discovery and review experience with fast search, filtering, and responsive UI flows.
- Improved query performance through indexing and optimized query patterns for common lookups.
- Added secure review workflows with validation and failure-safe API behavior.

EDUCATION

New Jersey Institute of Technology

Master of Science (M.S.), Computer Science

New Jersey, USA

Jan 2024 - May 2025

Jawaharlal Nehru Technological University Hyderabad

Bachelor of Technology (B.Tech.), Computer Science

Hyderabad, India

June 2018 - Aug 2022

ACCOMPLISHMENTS

National Women Empowerment Award - AICTE LILAVATI

Apr 2021

Honored nationally for leading digital-literacy initiatives empowering 200+ women.

Academic Excellence & Leadership Distinction

Mar 2021

Honored for academic achievement and leadership in fostering innovation and student collaboration.
